

Haruki Watanabe

Professor of Physics & IAS Professor
Department of Physics
HKUST Jockey Club Institute for Advanced Study
Hong Kong University of Science and Technology

Office:	Room 4453, HKUST, Clear Water Bay, Kowloon, Hong Kong
Phone:	(852) 2358-7476
Email:	hwatanabe@ust.hk
ORCID:	0000-0002-8112-021X
Web (English):	Physics Dept. · Research Portal · IAS Profile
Web (Japanese):	haruki-watanabe-hkust.github.io/group-site

Academic Appointments

Mar. 2026 – Present: Professor of Physics, Department of Physics, and **IAS Professor**, HKUST Jockey Club Institute for Advanced Study, Hong Kong University of Science and Technology
Jan. 2019 – Feb. 2026: Associate Professor (PI), Department of Applied Physics, University of Tokyo
Feb. 2016 – Dec. 2018: Lecturer (PI), Department of Applied Physics, University of Tokyo
Jul. 2015 – Jan. 2016: Pappalardo Postdoctoral Fellow, Massachusetts Institute of Technology

Education

Aug. 2011 – May 2015: Ph.D. in Physics, University of California, Berkeley
(Advisor: Prof. Ashvin Vishwanath); Ph.D. thesis
Apr. 2010 – Mar. 2012: M.Sc. in Physics, University of Tokyo (with honors)
Apr. 2006 – Mar. 2010: B.A. in Physics, University of Tokyo (with honors)

Research Interests

Uncovering universal properties of quantum many-body systems from a symmetry perspective. My research spans several interconnected areas:

- *Spontaneous symmetry breaking and Nambu–Goldstone bosons* — Established a unified counting rule for Nambu–Goldstone bosons in nonrelativistic systems [PRL **108**, 251602 (2012); PRX **4**, 031057 (2014)], and proved the absence of quantum time crystals [PRL **114**, 251603 (2015)].
- *Topological phases and symmetry indicators* — Developed a symmetry-based framework for diagnosing band topology in all 230 (and 1651 magnetic) space groups [Nat. Commun. **8**, 50 (2017); Sci. Adv. **4**, eaat8685 (2018)], extended to topological superconductors [Sci. Adv. **6**, eaaz8367 (2020)].
- *Nonlinear electromagnetic responses in superconductors* — Formulated gauge-invariant theory of optical responses and established rigorous sum rules for nonlinear conductivities [PRB **102**, 165137 (2020)].
- *Frustration-free quantum many-body systems* — Proved rigorous bounds on dynamical critical exponents and finite-size gaps in gapless frustration-free systems [PRX **15**, 041050 (2025); PRL **133**, 176001 (2024)].

Awards

- **Frontiers of Science Award** (International Congress of Basic Science, 2026)
- Particle Physics Medal (Japan Particle and Nuclear Theory Forum, 2025)
- Faculty of Engineering Best Teaching Award (University of Tokyo, 2024)

- The Commendation for Science and Technology (Minister of Education, Japan, 2024)
- **New Horizons in Physics Prize** (Breakthrough Prize Foundation, 2022)
- Condensed-Matter Science Prize (2017)
- Yukawa Memorial Prize (2016)
- Young Scientist Award (Physical Society of Japan, 2016)
- Seitaro Nakamura Prize (2013)
- Outstanding Graduate Student Instructor (UC Berkeley, 2012)

Publications

Over 70 refereed publications (see attached publication list), including 16 in Physical Review Letters, 6 in Physical Review X, 3 in Science Advances, 2 in Proceedings of the National Academy of Sciences, and 1 in Nature Communications. Seven papers selected as Editors' Suggestions. Author of an invited review article in Annual Review of Condensed Matter Physics [**11**, 169 (2020)].

Selected Publications (asterisk denotes corresponding author; underline denotes myself)

[1] S. Watanabe, Y. Motome, and H. Watanabe*, *Dualities and topological classification of the $S = 1$ pyrochlore spin ice*, Physical Review Letters (in press).

[2] R. Masaoka, T. Soejima, and H. Watanabe*, *Rigorous Lower Bound on Dynamical Exponents in Gapless Frustration-Free Systems*, Phys. Rev. X **15**, 041050 (2025).

[3] H. Watanabe, H. Katsura, and J. Y. Lee*, *Critical Spontaneous breaking of U(1) symmetry at zero temperature in one dimension*, Phys. Rev. Lett. **133**, 176001 (2024). Editors' Suggestion

[4] F. Tang, S. Ono, X.-G. Wan, and H. Watanabe*, *High-throughput Investigations of Topological and Nodal Superconductors*, Phys. Rev. Lett. **129**, 027001 (2022). Editors' Suggestion

[5] H. Watanabe and H. C. Po*, *Fractional Corner Charge of Sodium Chloride*, Phys. Rev. X **11**, 041064 (2021).

[6] S. Ono, H. C. Po, and H. Watanabe*, *Refined symmetry indicators for topological superconductors in all space groups*, Sci. Adv. **6**, eaaz8367 (2020).

[7] H. C. Po, H. Watanabe, and A. Vishwanath*, *Fragile Topology and Wannier Obstructions*, Phys. Rev. Lett. **121**, 126402 (2018). Editors' Suggestion

[8] E. Khalaf, H. C. Po, A. Vishwanath, and H. Watanabe*, *Symmetry indicators and anomalous surface states of topological crystalline insulators*, Phys. Rev. X **8**, 031070 (2018).

[9] H. C. Po, A. Vishwanath*, and H. Watanabe, *Symmetry-based indicators of band topology in the 230 space groups*, Nat. Commun. **8**, 50 (2017).

[10] H. Watanabe and M. Oshikawa*, *Absence of Quantum Time Crystals*, Phys. Rev. Lett. **114**, 251603 (2015).

Invited Talks

Over 40 invited talks at international workshops and conferences, including Aspen Center for Physics, ICTS Bangalore, Kavli IPMU, Kavli ITS Beijing, OIST, and UC Berkeley. Three colloquium talks, including at Caltech.

Recent Invited Talks (selected)

- Mini-Workshop on Time Crystals and Spatiotemporal Order, Shanghai Jiao Tong University (Oct. 2026)
- International Congress of Basic Science, BIMSA Beijing (Aug. 2026)
- Emergent Phenomena in Quantum Matter, YITP Kyoto (Jun.–Jul. 2026)
- Quantum Matter Frontiers, KIAS Seoul (Jun. 2026)
- Recent Advances in Studies of Strongly Correlated Electrons, ICISE Quy Nhon (Jun. 2026)
- International Workshop on Quantum Geometry, RIKEN (Feb. 2026)
- Generalised Symmetries and Anomalies in Quantum Phases of Matter, ICTS Bangalore (Jan. 2026)
- Mathematical Foundations of Topological Materials, IAS HKUST (Jan. 2026)
- 100 Years of Quantum Physics, ICISE Quy Nhon (Oct. 2025)

- Aspects of Generalized Symmetries, OIST (Jun. 2025)
- Unraveling the Particle World and the Cosmos, UC Berkeley (Sep. 2024)
- Recent Developments and Challenges in Topological Phases, YITP Kyoto (Jun. 2024)

Research Grants

- **JSPS Grant-in-Aid for Scientific Research (B)**, US$123.9k (2024 – 2028)
- **JSPS Grant-in-Aid for Scientific Research (B)**, US$115.3k (2021 – 2024) *Co-Investigator
- **JSPS Grant-in-Aid for Scientific Research (B)**, US$107.5k (2020 – 2024)
- **Japan Science and Technology PRESTO**, US$200k (2018 – 2021)
- **JSPS Grant-in-Aid for Young Scientists (B)**, US$27.7k (2017 – 2019)
- **Grant for the University of Tokyo Excellent Young Researchers**, US$40k (2017 – 2018)

(Currency conversion assumes approx. 1 USD = 150 JPY)

(Co-)Organized Workshops

- **Topology, Entanglement, and Dynamics in Quantum Many-Body Systems**, Dec. 2025, ISSP Kashiwa
  http://www.phys.keio.ac.jp/members/furukawa/2025topoent/
- **Recent Developments on Multipole Moments in Quantum Systems**, May 2020, via Zoom
  https://sites.google.com/g.ecc.u-tokyo.ac.jp/workshop-multipole/
- **Symmetry and Topology in Condensed-Matter Physics**, Jun. 2018, University of Tokyo
  https://sites.google.com/site/symmetrytopologycmp/

Full List of Publications and Talks

Haruki Watanabe

Preprints

1. G. Xun, W. Cao, H. Watanabe*,
   Local-Channel Stability of Classical Z_2 Lattice Gauge Models.
   arXiv:2610.27939.

2. S. Sengoku, W. Cao, H. Watanabe*,
   Thermodynamic Stability of Classical Z_2 Lattice Gauge Models.
   arXiv:2610.27938.

3. S. Sengoku, H. Watanabe*,
   Absence of nontrivial local conserved quantities in a class of $U(1)$-symmetric spin-1 chains.
   arXiv:2608.17548.

4. W. Cao, H. Watanabe*,
   Quantized topological invariant of symmetry-projected Gibbs states.
   arXiv:2608.04350.

5. W. Cao, H. Watanabe*,
   Distinct finite-temperature phase diagrams of non-invertible Kennedy–Tasaki duals.
   arXiv:2607.24231.

6. H. Watanabe*,
   Gibbs-state phases beyond microscopic symmetry breaking: A phase invariant for the 3D toric code.
   arXiv:2607.00134.

7. S. Watanabe, H. Watanabe*,
   Gauge-invariant electromagnetic responses in superconductors.
   arXiv:2501.13722.

8. S. Watanabe, H. Watanabe*,
   A gauge-invariant formulation of optical responses in superconductors.
   arXiv:2410.18679.

Refereed Papers

1. S. Watanabe, Y. Motome, H. Watanabe*,
Dualities and topological classification of the $S = 1$ pyrochlore spin ice.
Physical Review Letters (in press).

2. S. Watanabe, Y. Motome, H. Watanabe*,
Topological Phase Transitions and Their Thermodynamic Fate in Arbitrary-S Classical Pyrochlore Spin Ice.
Physical Review X **16**, 041016 (2026).

3. C.-g. Oh, H. Watanabe, N. Tsuji*,
Third-harmonic generation in superconductors: Role of quantum geometry in the competition between Higgs mode and quasiparticles.
Physical Review B **114**, 074508 (2026).

4. S. Watanabe, Y. Motome, H. Watanabe*,
Continuous crossover between high-pressure ice phases VII and X driven by monopole screening: a model study.
Physical Review B **114**, 094108 (2026).

5. S. Watanabe, Y. Motome, H. Watanabe*,
Monte Carlo Study of the Phase Transition of the XY Model on a Diamond Lattice.
Journal of the Physical Society of Japan **95**, 085002 (2026).

6. S. Ono, R. Masaoka, H. Watanabe, H. C. Po*,
Frustration-free free fermions.
Physical Review Research **8**, 023171 (2026).

7. R. Masaoka, S. Ono, H. C. Po, H. Watanabe*,
Frustration-free fermionic systems: Finite-size scaling and band topology.
Physical Review B **113**, 195120 (2026).

8. R. Kobayashi, H. Watanabe*,
Projective Representations, Bogomolov Multiplier, and Their Applications in Physics.
International Journal of Theoretical Physics **65**, 65 (2026).

9. R. Masaoka, T. Soejima, H. Watanabe*,
Rigorous Lower Bound on Dynamical Exponents in Gapless Frustration-Free Systems.
Physical Review X **15**, 041050 (2025).

10. C. Lee, Y. Hu, G. Y. Cho, H. Watanabe*,
$\mathbb{Z}_N$ generalizations of three-dimensional stabilizer codes.
Physical Review B **112**, 155136 (2025). *Editors' Suggestion*

11. S. Sengoku, H. C. Po, H. Watanabe*,
Quasilocal Frustration-Free Free Fermions.
Physical Review B **112**, 115104 (2025).

12. R. Masaoka, T. Soejima, H. Watanabe*,
Rigorous lower bound of the dynamical critical exponent of the Ising model.
Journal of Statistical Physics **192**, 76 (2025).

13. R. Masaoka, T. Soejima, H. Watanabe*,
Quadratic dispersion relations in gapless frustration-free systems.
Physical Review B **110**, 195140 (2024).

14. H. Watanabe, H. Katsura, and J. Y. Lee*,
Critical Spontaneous breaking of U(1) symmetry at zero temperature in one dimension.
Physical Review Letters **133**, 176001 (2024). *Editors' Suggestion*

15. S. Ono, K. Shiozaki, and H. Watanabe*,
Classification of time-reversal symmetric topological superconducting phases for conventional pairing symmetries.
Physical Review B **109**, 214502 (2024).

16. C. Oh and H. Watanabe*,
Revisiting electromagnetic response of superconductors in mean-field approximation.
Physical Review Research **6**, 013058 (2024).

17. Y. Hu and H. Watanabe*,
Spontaneous symmetry breaking without ground state degeneracy in generalized N-state clock model.
Physical Review B **107**, 195139 (2023).

18. H. Watanabe, M. Cheng, and Y. Fuji*,
Ground state degeneracy on torus in a family of $\mathbb{Z}_N$ toric code.
Journal of Mathematical Physics **64**, 051901 (2023).

19. K. Takasan, M. Oshikawa, and H. Watanabe*,
Drude weights in one-dimensional systems with a single defect.
Physical Review B **107**, 075141 (2023).

20. H. Kobayashi and H. Watanabe*,
Vanishing and nonvanishing persistent currents of various conserved quantities.
Physical Review Letters **129**, 176601 (2022).

21. F. Tang, S. Ono, X.-G. Wan, and H. Watanabe*,
High-throughput Investigations of Topological and Nodal Superconductors.
Physical Review Letters **129**, 027001 (2022). *Editors' Suggestion*

22. H. Watanabe*,
Bloch theorem in the presence of an additional conserved charge.
Physical Review Research **4**, 013043 (2022).

23. K. Naito, R. Takahashi, H. Watanabe, and S. Murakami*,
Fractional hinge and corner charges in various crystal shapes with cubic symmetry.
Physical Review B **105**, 045126 (2022).

24. Y. Liu, Y. Fuji, and H. Watanabe*,
Bloch oscillations in the spin-1/2 XXZ chain.
Physical Review B **104**, 205115 (2021).

25. H. Tasaki and H. Watanabe*,
Off-Diagonal Long-Range Order Implies Vanishing Charge Gap.
Physical Review B **104**, L180501 (2021).

26. H. Watanabe and H. C. Po*,
Fractional Corner Charge of Sodium Chloride.
Physical Review X **11**, 041064 (2021).

27. H. Watanabe, Y. Kato, H. C. Po, and Y. Motome*,
Fractional corner magnetization of collinear antiferromagnets.
Physical Review B **103**, 134430 (2021).

28. A. Matsugatani, S. Ono, Y. Nomura, and H. Watanabe*,
qeirreps: an open-source program for Quantum ESPRESSO to compute irreducible representations of Bloch wavefunctions.

Journal of Physics: Conference Series **334**, 012044 (2011).

Invited Talks in International Workshops / Conferences

1. Mini-Workshop on Time Crystals and Spatiotemporal Order
Oct. 27 (2026) School of Physics and Astronomy, Shanghai Jiao Tong University (Shanghai, China)
From Time Crystals to Thermal Phases beyond Symmetry Breaking.

2. International Congress of Basic Science (ICBS) 2026
Aug. 9 – Aug. 21 (2026) Beijing Institute of Mathematical Sciences and Applications (Beijing, China)
Symmetry-based indicator of band topology.

3. Emergent Phenomena in Quantum Matter: From Symmetry to Dynamics
Jun. 29 – Jul. 10 (2026) YITP (Kyoto, Japan)
Phase Distinction Beyond Symmetry Breaking at Finite Temperature.

4. Quantum Matter Frontiers: Entanglement, Symmetry, and Emergence
Jun. 15 – Jun. 19 (2026) KIAS (Seoul, Korea)
Phase Distinction Beyond Symmetry Breaking at Finite Temperature.

5. Recent Advances in Studies of Strongly Correlated Electrons
Jun. 1 – Jun. 5 (2026) ICISE (Quy Nhon, Vietnam)
Phase Distinction Beyond Symmetry Breaking at Finite Temperature.

6. International Workshop on Quantum Geometry
   Feb. 3 – Feb. 6 (2026) RIKEN (Wako, Japan)
   General Properties of Frustration-Free Quantum Many-Body Systems.

7. New Frontiers of Geometry and Topology in Condensed Matter Physics
   Jan. 26 – Feb. 9 (2026) ISSP (Kashiwa, Japan)
   General Properties of Frustration-Free Quantum Many-Body Systems.

8. Generalised symmetries and anomalies in quantum phases of matter
   Jan. 5 – Jan. 16 (2026) ICTS (Bangalore, India)
   Frustration-Free Quantum Many-Body Systems.

9. Mathematical Foundations of Topological Materials
   Jan. 6 – Jan. 9 (2026) IAS, HKUST (Hong Kong)
   General Properties of Frustration-Free Systems.

10. Topology, Entanglement, and Dynamics in Quantum Many-Body Systems
    Dec. 22 (2025) ISSP (Kashiwa, Japan)
    Frustration-Free Quantum Many-Body Systems.

11. 100 Years of Quantum Physics
    Oct. 6 – Oct. 9 (2025) International Centre for Interdisciplinary Science and Education (Quy Nhon, Vietnam)
    General Properties of Frustration-Free Quantum Many-Body Systems.

12. Frontiers of Quantum Matter
    Aug. 4 – Aug. 6 (2025) Longfu Cultural Center (Beijing, China)
    General Properties of Frustration-Free Quantum Many-Body Systems.

13. Aspects of Generalized Symmetries
    Jun. 16 – Jun. 20 (2025) OIST (Okinawa, Japan)
    General properties of frustration-free systems.

14. Frontiers in Field Theory and Phenomenology
    May 19 – May 23 (2025) Kavli IPMU (Kashiwa, Japan)
    Conjectures on frustration free systems.

15. Phases of Matter from an Informational Perspective
    Dec. 4 – Dec. 11 (2024) Hong Kong University of Science and Technology (Hong Kong)
    Finite size gaps and low-energy excitations in gapless frustration free systems.

16. Effective Field Theory Beyond Ordinary Symmetries
    Dec. 2 – Dec. 6 (2024) Institute for Basic Science (Daejeon, Korea)
    Finite size gaps and low-energy excitations in gapless frustration free systems.

17. Unraveling the Particle World and the Cosmos at Berkeley
    Sep. 26 – Sep. 28 (2024) UC Berkeley (Berkeley, USA)
    Finite size gaps and low-energy excitations in gapless frustration free systems.

18. Recent Developments and Challenges in Topological Phases
    Jun. 3 – Jun. 14 (2024) Yukawa Institute for Theoretical Physics (Kyoto, Japan)
    Finite size gaps and low-energy excitations in gapless frustration free systems.

19. Condensed Matter Physics Conference 2023
    Aug. 7 – Aug. 11 (2023) Yangtze River Delta Physics Research Center (Liyang, China)
    Spin models for spontaneous symmetry breaking, topological orders, and fractons with weird ground state degeneracy.

20. Theoretical studies of topological phases of matter
    Apr. 4 – Apr. 6 (2023) International Institute for Advanced Studies (Kyoto, Japan)
    Ground state degeneracy on torus in topologically ordered phases and in symmetry-broken phases.

21. Topological Phases of Matter: From Low to High Energy
    Mar. 6 – Mar. 10 (2023) Institute of Nuclear Theory (Seattle, USA)
    Ground state degeneracy on torus in topologically ordered phases and in symmetry-broken phases.

22. Novel Quantum States in Condensed Matter 2022
    Oct. 31 – Dec. 2 (2022) Yukawa Institute for Theoretical Physics (Kyoto, Japan)
    Ground state degeneracy on torus in topologically ordered phases.

23. Advances in The Physics of Topological and Correlated Matter
    Sep. 19 – Sep. 23 (2022) Institute for Basic Science (Dejeon, Korea)
    Topological Material Search via Symmetry Indicator and Filling Anomaly.

24. Topological Quantum Electrons Interacting In-person
    July 10 – July 16 (2022) International Centre for Interdisciplinary Science and Education (Quy Nhon, Vietnam)
    Vanishing and nonvanishing persistent currents of various conserved quantities.

25. Focus Week on Quantum Mechanical Systems at Large Quantum Number
    Sep. 3 (2021) online (IPMU, Japan)
    Bulk-boundary correspondence of topologically trivial insulators.

26. Correlated Electrons Virtual International Seminars (CEVIS)
    Mar. 25 (2021) online
    Multipole moments and fractional corner charges of insulating materials.

27. Novel Phases of Quantum Matter
    Dec. 23 (2019) – Jan. 2 (2020) International Centre for Theoretical Sciences (Bengaluru, India)
    Symmetry indicators for topological superconductors.

28. The 5th East Asia Joint Seminars on Statistical Physics
    Oct. 22 – Oct. 25 (2019) Chinese Academy of Sciences (Beijing, China)
    Quantum Quench and f-sum Rules on Linear and Non-Linear Conductivities.

29. The Future of Topological Materials
    Oct. 2 – Oct. 5 (2019) Princeton Univ (USA)
    Symmetry indicators for topological superconductors.

30. SPICE workshop: Young Research Leaders Group Workshop
    Sep. 30 – Oct. 3 (2019) Johannes Gutenberg Univ (Mainz, Germany)
    Symmetry indicators for topological superconductors.

31. The 2nd Workshop on Spin-orbit Coupled Topological States
    Sep. 19 – Sep. 21 (2019) POSTECH (Pohang, Korea)
    Symmetry indicators for topological superconductors.

32. Theoretical studies of topological phases of matter
    Feb. 12 – Feb. 15 (2019) U Tokyo (Komaba, Japan)
    Symmetry indicators of band topology I–III.

33. Workshop on Recent Developments in Chiral Matter and Topology
    Dec. 6 – Dec. 9 (2018) National Taiwan Univ (Taipei, Taiwan)
    Symmetry-Based Indicator and Fragile Topology with/without Interactions.

34. Topological Phases and Excitations of Quantum Matter
Jun. 24 – Jul. 29 (2018) Aspen Center For Physics (Aspen, USA)
Symmetry-Based Indicator and Fragile Topology with/without Interactions.

35. Topological Phases with Higher-Order Boundary States
Jul. 12 – Jul. 13 (2018) Freie Universität (Berlin, Germany)
Symmetry-based Indicators for higher-order topological insulators.

36. Topological Phases of Matter: from the Quantum Hall Effect to Spin Liquids
Jun. 11 – Jul. 6 (2018) Kavli Institute for Theoretical Sciences (Saclay, France)
Many-body polarization and Thouless pump via twisted boundary condition.

37. New Paradigms in Quantum Matter 2018
Jun. 25 – Jul. 6 (2018) Institute of Physics, Chinese Academy of Sciences (Beijing, China)
Symmetry-based Indicators of Topology.

38. Topology and Correlation
Jun. 7 – Jun. 8 (2018) Korea Institute for Advanced Study (Seoul, Korea)
Symmetry-based Indicators of Topology.

39. Novel Quantum States in Condensed Matter 2017
Oct. 23 – Nov. 24 (2017) Yukawa Institute for Theoretical Physics (Kyoto, Japan)
Complete Theory of Symmetry-based Indicators of Band Topology.

40. Topological States and Phase Transitions in Strongly Correlated Systems
Jul. 3 – Jul. 21 (2017) Kavli Institute for Theoretical Sciences (Beijing, China)
Complete Theory of Symmetry-based Indicators of Band Topology.

41. SPICE workshop: Spin Dynamics in the Dirac Systems
Jun. 7 – Jun. 9 (2017) Schloss Waldthausen (Mainz, Germany)
Complete Theory of Symmetry-based Indicators of Band Topology.

42. Theory of Correlated Topological Materials
Feb. 6 – Mar. 3 (2017) Institute for Solid State Physics (Kashiwa, Japan)
More on the Lieb-Schultz-Mattis theorem.

43. International School on Topological Science and Topological Matters
Feb. 13 – Feb. 18 (2017) Yukawa Institute for Theoretical Physics (Kyoto, Japan)
Extensions of Lieb-Schultz-Mattis theorem and its applications to quantum spin liquid and topological semimetals.

44. The 2nd Conference on Condensed Matter Physics
Jul. 20 – Jul. 22 (2016) Nanjing University (Nanjing, China)
Filling-enforced gaplessness in nonsymmorphic space groups.

45. Nambu and Science Frontier
Nov. 17 (2015) Osaka University (Osaka, Japan)
Nambu-Goldstone Bosons in Nonrelativistic Systems.

46. Higgs Modes in Condensed Matter and Quantum Gases
Jun. 23 – Jun. 25 (2014) Yukawa Institute for Theoretical Physics (Kyoto, Japan)
Nambu-Goldstone Bosons in Nonrelativistic Systems.

47. Non-Fermi Liquids
Apr. 17 – Apr. 18 (2014) Stanford University (California, USA)
Criterion for Non-Fermi Liquid Phases via Interactions with Nambu-Goldstone Bosons.

48. Effective Field Theories for Quantum Many-Body Systems
Jan. 15 – Jan. 17 (2014) Institute for Theoretical Physics (Madrid, Spain)
Noncommuting Momenta and the Dynamics of Translational Moduli.

Colloquium Talks

1. Pohang University of Science and Technology (Pohang, Korea)
   Dec. 5 (2022)
   New twist in familiar spin models.

2. Physics Colloquium at University of Tokyo (Tokyo, Japan)
   Dec. 18 (2021) online
   Fractional corner charges of multipole insulators.

3. Physics Colloquium at California Institute of Technology (Pasadena, USA)
   Dec. 3 (2020) online
   Multipole moments and fractional corner charges of insulating materials.
